Mechanistic Interpretability of Plant Genomic Foundation Models: Dissecting How Transformers Process Plant DNA

Ihor Kendiukhov

Supplementary Figures

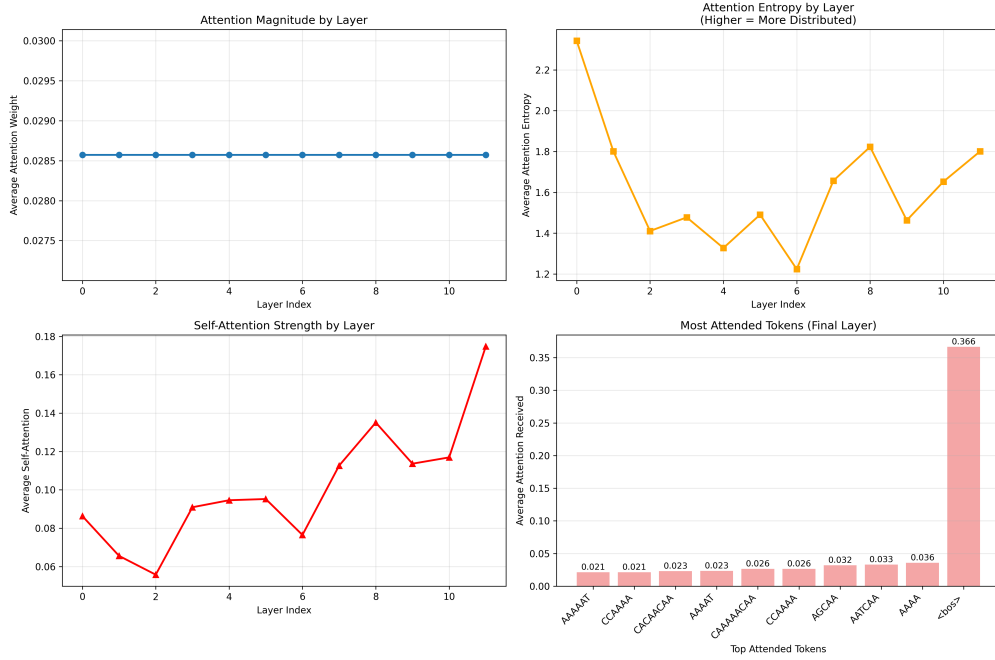

Figure 1: **Supplementary Figure S1.** Attention weight statistics across all 144 attention heads in Plant-DnaGemma, showing the distribution of mean attention weights, entropy, and maximum attention values per head.

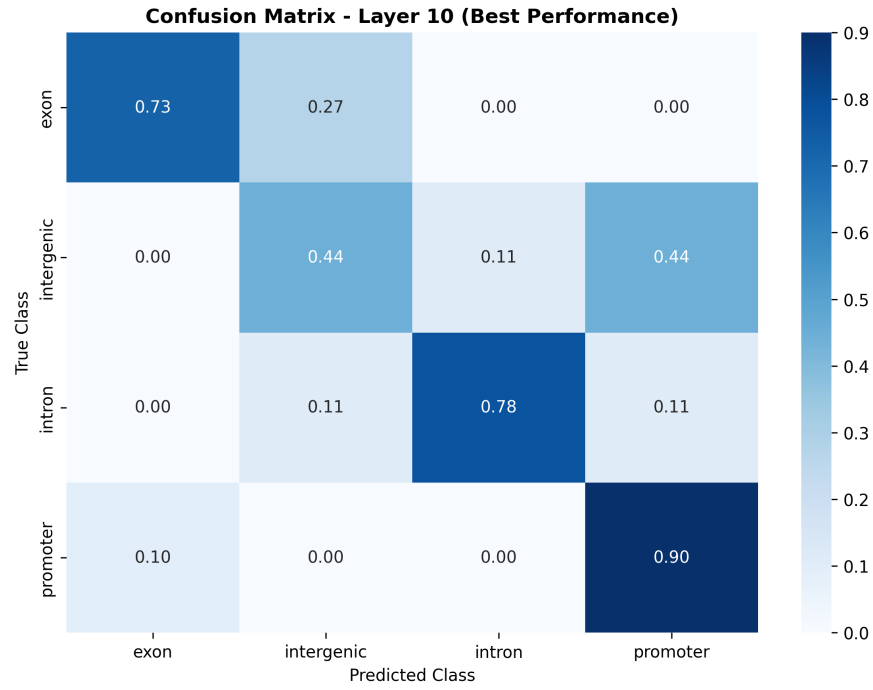

Figure 2: **Supplementary Figure S2.** Confusion matrix for the linear probing classifier at layer 10 (best-performing layer), showing classification patterns across the four genomic sequence types.

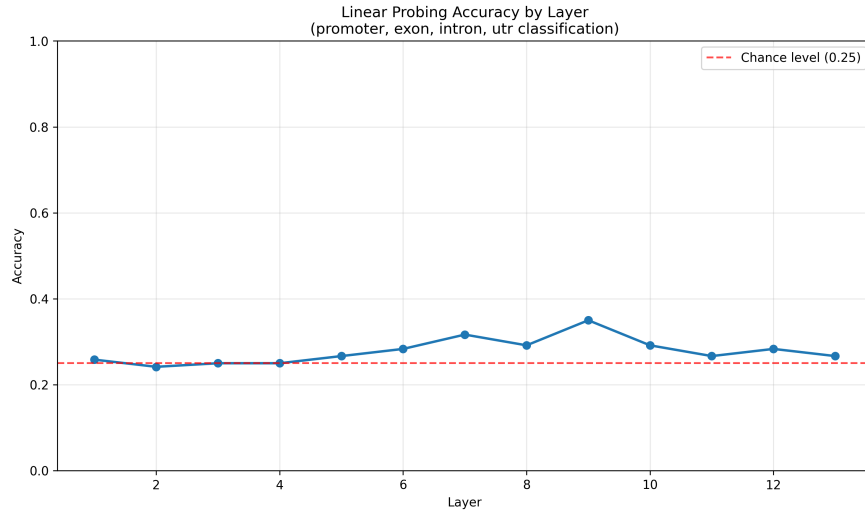

Figure 3: **Supplementary Figure S3.** Probing accuracy plotted by layer, showing the progression of classification performance from the embedding layer through all 12 transformer layers.
